

Setup Microsoft Outlook on Android

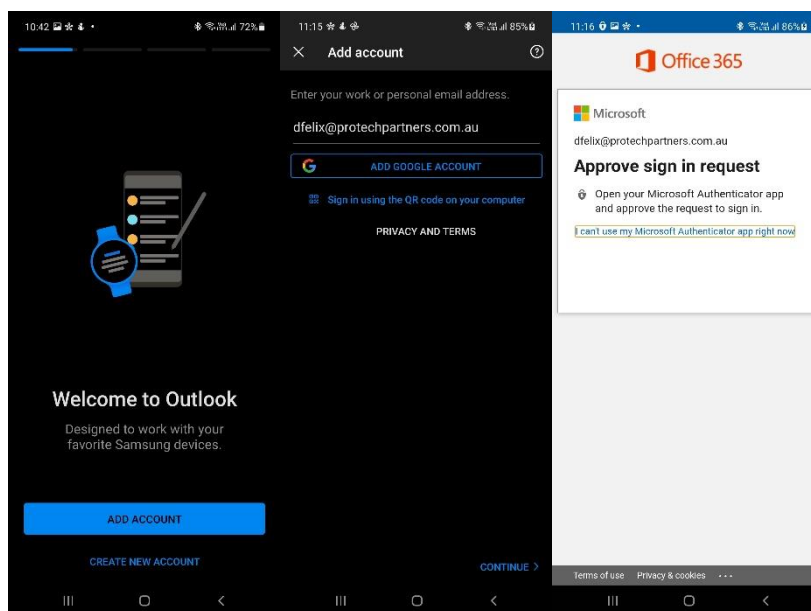

1. Downloaded the free Outlook app from the Google Play store. The app store currently has the icon displayed below:

2. If it's installed already the button will display "Open". It may also display "Download" if so please download the app. If it's "enable" like mine press the button and then Open:

- When the app is opened click on “Add account”. If you need to find the app please search for the app icon as displayed in the previous screenshot. Once you’ve entered your email address it will prompt you for your password and possibly may require approval via the Microsoft Authenticator app or another form of authentication depending on your configuration:

- Once your account has been added you will see the following screen. You can click on “Maybe Later” unless you want to go through the process again to add another account. You will now have access to your email via Outlook on your Android device!
